DETAILED ACTION

1. Figures 1-3 and 6a should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-6, 8-13, 15-20 are rejected under 35 U.S.C. 102(b) as anticipated by or 35 U.S.C. 103(a) as being unpatentable over the prior art device disclosed by applicant, Figs. 1-3. The prior art device disclosed by applicant includes a first flange 18 connected to the hub and a

Application/Control Number: 10/626,991

Art Unit: 3654

second flange 16 also connected to the hub. The inner coupling 30 of the prior art device has a hole at the center and is offset towards the first lip of the hub (where it attaches to flange 18). The recitation "integral with the hub" in line 5 of claim 1 or line 4 of claim 8, and "integrally forming a flange with the hub" of claim 15, line 5 does not structurally distinguish from a flange that is connected rigidly with the hub such as by ultrasonic welding, as in the prior art device. In any event the integral forming of side flanges with a hub of a spool or reel such as by molding the spool all in one piece is old and well known in the art as shown in either of Morita or Akao et al and the forming of both of the flanges of the prior art device disclosed by applicant with its hub would have been obvious to one of ordinary skill in the art in view thereof. Regarding claims 3, 10 and 17 the offset of the inner coupling of the prior art device is clearly at least 10 percent of the thickness of the hub. With respect to claims 4-5, 11-12 and 18-19 the range of 20-25 percent appears to met by the prior art device. However, assuming that it is not, it would have been an obvious design consideration to one of ordinary skill in the art to make the offset slightly more to fall within the 25 percent dimension since it is so close to being that already that any slight difference would not have been critical.

Allowable Subject Matter

5. Claims 7 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3654

Ş

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hansen et al, Nakagawa and Rambosek et al are cited to show other spools having offset inner couplings like the admitted prior art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John M. Jillions whose telephone number is (703) 308-2685. The examiner can normally be reached on M-F 9:15 - 5:45.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kathy Matecki can be reached on (703) 308-2688. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
